### Work Authorization Document **NSTX Upgrade Project** Control 3300 Title: Bakeout System Mods for CSU Account #: WBS 1.3.3 Title: **Bakeout System** Period of Performance: 03 May 2010 through 20 August 2014 Authorized Budget: \$79 Control Account Manager: Raki Revision #: 0 July-11 **Revision Date:**

### Authorized Work Description:

The Bakeout Heating System provides a heating system to bake out the vacuum vessel. It includes a heating blanket system for the vacuum vessel and the insulation for that system. It includes a supplementary heating system for the center stack coil subsystems. The controls and interlocks for safe operation of this system is included. This WBS element includes the engineering design, analysis, procurement activities and component fabrication.

This WBS element includes the purchase of a new more powerful power supply, to replace the existing one, to be used for electrical heating of the vessel. It is proposed to buy a 0-8V, 8000 amps for the application. Suitable cable leads will be fabricated and necessary interlocks will be incorporated.

### Attachments:

1- A detailed Control Account schedule showing all work packages and planning packages.

2- Budgeted Cost by month.

3- Original Work Authorization Form (WAF)

4- WBS Dictionary sheet that defines the scope of work for this WBS element.

# **Annex I – WBS Dictionary**

This Work Breakdown Structure (WBS) organizes and defines the scope of the NSTX Upgrade using the WBS as established by the original NSTX project and modified to accommodate the NSTX Upgrade.

<u>WBS</u> <u>L1</u> 1	<u>L2</u>	<u>L3</u>	Description NSTX UPGRADE PROJECT
	1.1	1.1.0 1.1.1 1.1.2 1.1.3	Plasma Facing Components Vacuum Vessel and Support Structure
	1.2	1.2.1 1.2.2 1.2.3 1.2.4	
	1.3	1.3.1 1.3.2 1.3.3 1.3.4 1.3.5	Bakeout Heating System Gas Delivery System
	1.4	1.4.1	Plasma Diagnostics Plasma Diagnostics
	1.5	1.5.1 1.5.2 1.5.3 1.5.4 1.5.5	AC/DC Converters DC Systems Control and Protection System
	1.6	1.6.1 1.6.2	<b>Central Instrumentation and Controls (I&amp;C)</b> Control System Data Acquisition System
	1.7	1.7.1 1.7.2 1.7.3	<b>Project Support &amp; Integration</b> Project Management and Integration Project Physics Integrated Systems Tests
	1.8	1.8.1 1.8.2	<b>Site Preparation and Assembly</b> Site Preparation Torus Assembly and Construction

- Evacuate the spent plasma constituents at the end of each pulse prior to the next plasma pulse;
- Remove impurities liberated during bakeout and/or discharge cleaning of the vacuum vessel interior; and
- Provide instrumentation and a Residual Gas Analyzer.

This WBS element also includes the controllers for all pumps and any baffles for backstreaming.

In order to accommodate the installation of the 2<sup>nd</sup> NBI on NSTX the existing Vacuum Pumping System will be modified. This WBS element includes the design, fabrication, and installation of a new vessel pumping system and includes new pump ducts off of the Neutral Beamline 2 duct, mechanical and electrical isolation of the system, vacuum diagnostic relocation, magnetic shielding and support of TVPS TMPs, and TMP service connections.

{<u>NSTX NB2 TVPS (Job 2485)</u>}

# WBS Element: 1.3.2

# WBS Title: Coolant Systems

Definition: The Coolant System provides cooling water to remove heat generated from NSTX systems during experimental operations. The systems include the:

- TF/PF bus and coil cooling water system;
- Center stack cooling water system;
- Component cooling water system; and the
- Ohmic heating cooling water system.

These systems will provide cooling water for normal operations and discharge cleaning of the vacuum vessel. This WBS includes engineering design, analysis, procurement activities, component fabrication and installation to the coil, bus and component cooling manifolds at the torus.

The new Center Stack on NSTX will require modifications to the existing coolant system. This WBS element will provide water cooling services to the new Center Stack and ancillary equipment in the NSTX test cell. {Water System Coolant Modifications for CSU (Job 3200)}

# WBS Element: 1.3.3

# WBS Title: Bakeout Heating System

Definition: The Bakeout Heating System provides a heating system to bake out the vacuum vessel. It includes a heating blanket system for the vacuum vessel and the insulation for that system. It includes a supplementary heating system for the center stack coil subsystems. The controls and interlocks for safe operation of this system is included. This WBS element includes the engineering design, analysis, procurement activities and component fabrication.

# WBS Level: 3

WBS Level: 3

This WBS element includes the purchase of a new more powerful power supply, to replace the existing one, to be used for electrical heating of the vessel. It is proposed to buy a 0-8V, 8000 amps for the application. Suitable cable leads will be fabricated and necessary interlocks will be incorporated.

{NSTX CSU Bakeout System Mods (Job 3300)}

# WBS Element: 1.3.4

# WBS Title: Gas Delivery Systems

# WBS Level: 3

- Definition: The Gas Delivery Systems provides storage and delivery of gases to and from NSTX systems during experimental operations. These systems provide:
  - Storage of on-site inventories of gases for use in NSTX plasma physics and future neutral beam experiments;
  - Delivery of prescribed quantities of gases at prescribed purity levels and flow rates;
  - Delivery of gases continuously or in pulses of prescribed shape and duration; and
  - Evacuation of delivery lines and components required for delivery.

This WBS includes engineering design, analysis, procurement activities, component fabrication and installation to the coil, bus and component cooling manifolds at the torus.

This WBS element includes the design, fabrication and installation, and test of two center stack fueling lines and modifications of the gas delivery assemblies.

{Gas delivery system modifications (Job 3400)}

# WBS Element: 1.3.5

# WBS Title: Glow Discharge Cleaning System

Definition: The Glow Discharge Cleaning (GDC) System establishes and controls the GDC process in NSTX. GDC is a mode of vacuum conditioning in which the vacuum vessel internal surfaces are cleaned by the bombardment of ions formed during the glow process. This WBS includes engineering design, analysis, procurement activities, component fabrication and installation of the GDC system. <u>There are no changes to the Glow</u> Discharge Cleaning system as part of the NSTX Upgrade Project.

# WBS Element: 1.4

# WBS Title: Plasma Diagnostics

Definition: The Plasma Diagnostics provide information on discharge parameters to characterize NSTX plasmas and guide its operation for optimized performance. The near term emphasis will be on detailed measurements of plasma profiles, using equipment presently available at PPPL. The long term objective will be to provide input for advanced plasma control systems, using new concepts and systems developed by the national NSTX team.

# WBS Level: 3

# WBS Level: 2

JOB NO 3300 CD2 R0.xls

8/3/2010

.

Cost Center:	9417		
Job Number:	3300		
Job Title:	NSTX Cent	NSTX Center Stack Upgrade - Bakeout System Mods	
Job Manager:	S. Ramakrishnan	shnan	
Materials and Subcontracts (M&S)	(M&S)	Basis of Estimate	
Description:			
DC Power Supply		Quotee from vendor	
		Previous experience	
		1 - National Standards	
		2 - Engineering Judgement/Experience	
		3 - Estimates/Data from External Sources (e.g., W7X, ATF, etc.)	
		4 - Previous PPPL/ORNL Experieince (e.g., TFTR, NSTX, PLT, etc.)	
		5 - Prototype Data/Test Results	
		3 - Catelogue Price/Vendor Quote	
		7 - Placed Contracts	
		3 - Actual experience for NCSX Work
